

Exchange CGM Files with popular formats: GIF, JPEG, PDF, TIFF

Convert CGM to Image provides the most flexible and easy to use software, transforming CGM graphics to common raster formats. This includes, technical illustrations, engineering drawings, well logs, exploration maps, and seismic sections.

Advanced features include color swapping, Group IV compression for monochrome images, and batch conversion. The Windows and Linux Server versions include access to the command-line interface for automated batch conversion.

Convert CGM Features:

- Convert Single or Batches of files - saving you time and money!
- DPI - dots per inch resolution control.
- Multi-picture CGM file support.

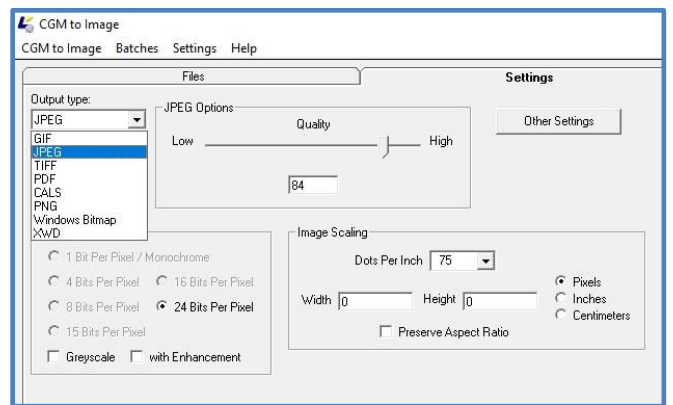

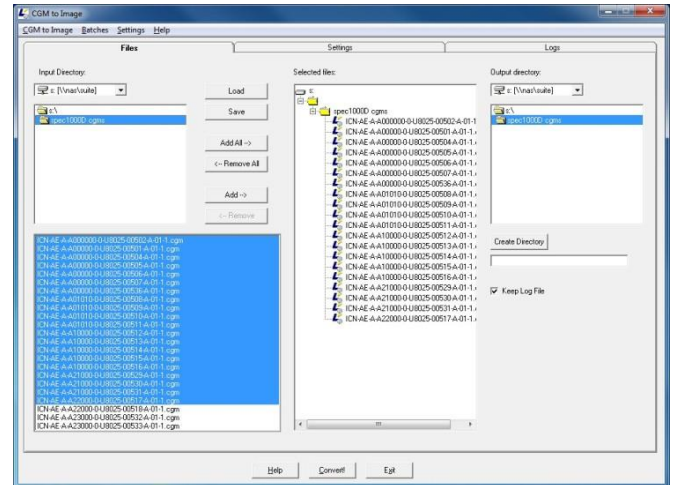

Options for compressions include, image quality, grayscale, Size (pixels, inches, metric), Aspect Ratio, Gamma, and Rotation.

Available for Windows and Linux platforms

Desktop Version - works on your Windows workstation. Offers an easy to use interface, simply choose the CGM files for conversion, select the output format, and the directory for the converted files.

Network Version - enables the Desktop version to be accessible on multiple computers.

Server Version - operates in a command line mode on both Windows and Linux platforms, control parameters can be set, enabling the automation & configuration of the conversion work-flow.

License: Perpetual

Versions: Desktop (Windows only),
Command Line (Server) and SDK

Platforms: Windows 7, 8 and 10,
Server 2008 and later, Linux

Input: CGM v1-4

Input Profiles: ATA, CALS, PIP, S1000D,
WebCGM

Output: BMP, CALS, GIF, JPEG, PDF (raster),
PNG & TIFF
