

# CONVERT *CGM to Image*™

Exchange CGM Files with popular formats: GIF, JPEG, PDF, TIFF...

Convert CGM provides the most flexible and easy to use software for exchanging CGM graphics. Including, technical illustrations, engineering drawings, well logs, exploration maps, and seismic sections into common formats used by the publishing industry.

Advanced features include color swapping, Group IV compression for monochrome images, and batch conversion. Server versions include access to the command-line interface for automated conversion.

## Convert CGM Features:

- Convert Single or Batches of files - saving you time!
- DPI - dots per inch resolution control.
- Multi-picture CGM file support.

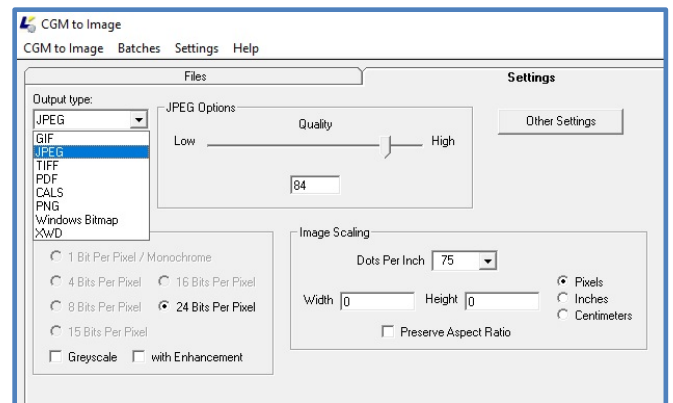

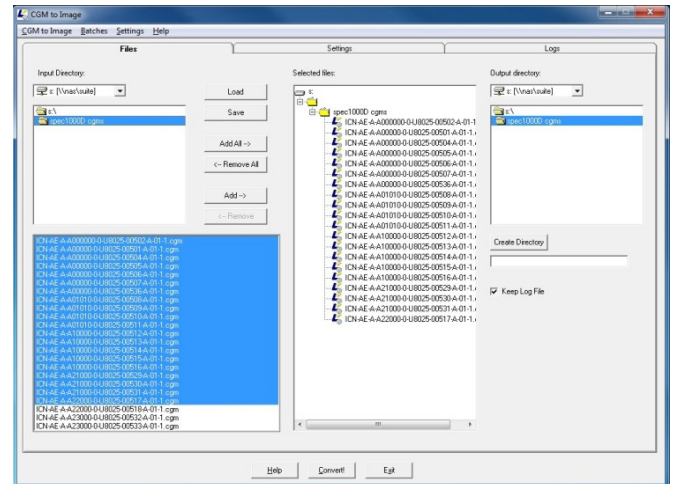

Options for compressions include, image quality, grayscale, Size (pixels, inches, metric), Aspect Ratio, Gamma, and Rotation.

## Available for Windows, Linux, and Unix environments

**Desktop Version** - works on your Windows workstation. Offers an easy to use interface, simply choose the CGM files for conversion, then select the output format, and the directory for the newly formatted files.

**Server Version** - The Server version operates in command line mode with control parameters, so you can "automate & configure" your conversion work-flow.

**Network Compatible** - for easier digital asset management on your workstations, servers, or storage arrays.
